

Finscan

Benefits of Finscan

- × Proven value yield of over 96 %
- × Reduces ghost detection by more than 90 %
- × Speed of up to 240 boards per minute
- × Does not require the turning of the board
- × Easy to adjust with different software modules
- × Secures constant quality on customer deliveries

Precise quality monitoring boosted with artificial intelligence

Finscan is the board scanner which sets the standard for sawmill scanners. It is a combination of the most advanced electronics and hardware and the best AI software. While technically simple and easy to maintain, Finscan performance is now better than ever before with proven value yield of over 96% at high speeds.

Every new Finscan scanner is operated by Buzzard® artificial intelligence with defect detection. The Buzzard® AI drives Finscan to grade the lumber with a great accuracy. Buzzard® also reduces ghost detection by more than 90%.

Buzzard

Special software modules

- × Quality grading
- × Component grading
- × Strength grading
- × Finger jointing
- × Cut-in-two
- × Ripping solutions
- × Re-edging
